

Shiezza Lauron

FULL STACK DEVELOPER

Profile

Full-stack developer with five years building web and mobile products end to end: React Native apps, the .NET and Node APIs behind them, and the schemas underneath. Most recent work is offline-first, for people using the app in the field where the network is not guaranteed. I care about clean data models, UIs that survive flaky networks, and shipping things that actually work.

Employment History

Full Stack Developer · Facilitron

MAY 2025 – PRESENT

Two production React Native apps (Works and FIT) for facility-management workflows, plus the shared .NET 9 backend on Azure SQL.

- **Works:** five role-based navigation stacks, offline-first sync queue, real-time SignalR updates and push notifications, all from one codebase shipping to iOS, Android, and web.
- **FIT:** offline-first field inspections with optimistic mutations, EAS Build across dev / staging / prod, shipping to iOS, Android, web, and Windows (React Native Windows).
- **API:** feature-based .NET 9 backend with EF Core and Dapper, real-time via Azure SignalR, batch PDF and Excel reporting.

React Native · Expo · TypeScript · TanStack Query · Zustand · .NET 9 · EF Core · Dapper · Azure SQL · SignalR

Full Stack Developer · Dash · Freelance

2025

Brought in on Dash Notes 1.5 (dashnote.io) after the release stalled in App Store review, and got it approved and live. Privacy-first notes app for macOS, web, and iOS, encrypted on-device with AES-256.

- Restored iOS subscriptions when the paywall hung forever and no customer could complete a purchase: the RevenueCat Capacitor plugin proxy fabricates a *.then*, so promises resolved with it never settle.
- Worked the release through round after round of App Store review to approval, each one a distinct iOS-only defect root-caused and fixed in turn.

Next.js · React · Editor.js · Electron · Capacitor · RevenueCat · Zustand

Full Stack Developer · LinkJolt · Freelance

2025

Performance work on the affiliate dashboards LinkJolt's customers live in all day. The platform covers link and coupon attribution, campaign invitations, Stripe and Paddle billing, and mass payouts.

- Traced the platform's excessive API traffic to redundant requests firing on every dashboard view and eliminated them, cutting round-trips per page load and database work per user.

Full Stack Developer · CSA 360 Software · Freelance

JUL 2022 – FEB 2025

Two and a half years owning feature work and production reliability on a security-operations platform for guard companies: scheduling, patrol tracking, incident reporting, visitor management, and real-time dispatch.

- Built the guard-tour module end to end: the GPS-verified patrol tracking that proves a guard actually walked the route, on the schedule the contract promised.
- Shipped operational pages across the product and ran the Jira-driven bug queue on a live platform.

Also Shipped For

EdCafe · 2025 — Interactive web apps with AI-powered features, plus back-end architecture work.

Baptist Faith · 2024 — Mobile app serving 10,000+ Bible-based audio and video files.

Lyra · 2024 — Stability, UI/UX polish, and bug fixes for a caregiver-focused mobile app.

TWIGOH · Aug 2020 – 2022 — Two years of front-end work at an early-stage startup: a unified social marketplace for discovering products and services through trusted reviews.

Selected Projects

Atlas · Live — Workout tracker with an offline mutation queue that syncs on reconnect, PWA install, and a native iOS app. Next.js 16, Neon Postgres, Drizzle, Better Auth.

Equilibria · In TestFlight — Habit tracker across four wellness pillars. React Native New Architecture, Fastify on Fly.io, Neon Postgres, English and Spanish.

Recall · In progress — Learning tracker that derives mastery from quiz performance rather than checkboxes. React, Supabase, Vercel Functions, Anthropic API with tool_use.

Education

Central Philippine University — BSc Computer Science: Software Development · 2015 – 2020.

Thesis: Integrated Amazon Promotion Reports using an Amazon MWS API connection.
